

Strattec Security Corporation, the world's leader in the design and manufacturing of Original Equipment locks and keys, announces the release of a new Cadillac (Part #692933) transponder key. This new key, with a circle plus on the blade, is designed to transmit a stronger RFID signal for better overall performance. The offset position of the transponder in the head of the key maximizes the RFID signal strength by placing it closer to the ignition signal.

Cadillac, Chevrolet and GMC logo keys are available now from your local Strattec distributor. Pontiac and Buick keys will be coming soon.
